### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance.

The present invention is directed to a manufacturing forecasting system and method for determining whether to produce an additional quantity of an intermediate product based on the predicted future demand for the intermediate product and a intermediate product quantity that can be produced as well as determining a total quantity of a by-product that can be produced, as a result of producing the intermediate product, during a specified period of time.

The closest prior art Aspen Technology's suite of Enterprise Operation systems and methods fail to teach or suggest either singularly or in combination *determining, based on the second intermediate product quantity and the intermediate product demand information, whether to produce any of the second intermediate product quantity of the intermediate product* as recited in independent Claims 37, 41 and 45.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Bodington et al., A History of Mathematical Programming in the Petroleum Industry (1990) teaches the well-known utilization of linear programming based planning models in the petroleum industry wherein such models/programs “have penetrated all facets of the oil business from strategic planning through process control.”

- Fransoo, Production control and demand management in capacitated process industries (1993) teaches the well-known utilization of decision support systems for demand management in the process industry wherein demand management involves determining what products and in what quantities to produce.

- Petrolsoft Introduces Wholesale Supply-Chain Planning Solution for Refinery-To-Terminal Distribution (1999) teaches a demand planning system and method for the petroleum (process) industry which forecasts sales (demand) for a plurality of products/product channels which are then aggregated to for a “single” demand plan.

- Dempster et al., Planning logistics operations in the oil industry (2000) teaches a system and method for modeling a multi-period supply, transformation and distribution scheduling for a consortium of oil companies wherein the system/method determines/knows the demand for a plurality of crude oil and final products at various points in a logistics network.

- Process Industry Modeling System Training Manual, Parts 1 and 2 (1998) teaches a system and method for modeling and optimizing the operations of
